

## We Are Nomad Aviation

Nomad Aviation is an FAA and EASA Certified Part 145 Repair Station and PMA fabrication facility specializing in the support of worldwide customers that require the certification, design, installation, modification and repair of avionics systems and associated structural and mechanical components aboard commercial, corporate, military and general aviation aircraft.

Mobility and flexibility come second nature to Nomad Aviation, since our Repair Station is governed by Operation Specifications (OP SPECS) granted by the FAA that authorize us to perform avionics modifications, installations or repairs on any make or model navigation, communication, pulse, autopilot or instrument system on any aircraft with no geographic limitations. Our vast capabilities allow us to provide our customers with turnkey avionics solutions using a "one-stop-shopping" approach, resulting in reduced aircraft down time, project cost and greater flexibility to allow our customers to pick and choose from services we offer.

### Our Capabilities At a Glance &ndash;

- Avionics Installations & Modifications
- Certification Engineering
- Avionics Maintenance Training
- Avionics Installation & Modification Oversight
- STC Development & Amendment
- Technical Publications / Technical Writing
- Avionics System Design Engineering
- PMA Kit Fabrication
- Software Development
